

OptiCrop: Empathy Map (End User - Farmer)

Says

- "I usually plant what my family has always grown, not sure if it is still the best choice."
- "I don't have access to a soil-testing lab nearby."

Thinks

- Worried about wasting a season on the wrong crop
- Wants a simple way to validate a planting decision before investing money

Does

- Consults other farmers or local agri-extension officers informally
- Relies on past experience and visible soil condition rather than measured data

Feels

- Uncertain when conditions (rainfall, soil quality) vary year to year
- Open to simple digital tools if they are easy to use without technical background

Pain Points

- No easy access to lab-based soil testing
- No simple tool translates raw soil/climate numbers into a clear recommendation

Gains (what a solution should deliver)

- A quick, low-friction way to get a data-backed crop suggestion
- Confidence that the recommendation considers their actual soil/climate values
